

Application_Hydro Turbine

Green power is playing an important role nowadays as its non-pollution and long term power supply from nature. Hydro power is one of the important part as the electric power is generated by the water from the nature which is continuous and big quantity. ProvibTech is able to supply a vibration protection and condition monitoring system for hydro turbines with different capacity.

Application Layout

This layout has a clear but simple introduction about the main measurement points for Hydro Turbine.
